SUMMARY

Product designer who designs for messy real-world constraints, like a 40-minute charging stop or crane data that operators don't trust. I run usability tests and heuristic evaluations, map service journeys and take ideas from research to high-fidelity Figma prototypes. My background in animation, graphic design and video editing shapes my visual and motion work. Currently pursuing an M.Des in UI/UX Design and available to join immediately.

WORK EXPERIENCE

Graphic Designer and Video Editor Intern (E-learning)
Tata Technologies | Pune, Maharashtra | Jun 2023 - Jun 2024

- Designed graphics, illustrations and animated visuals for e-learning modules and training manuals using Adobe Photoshop, Illustrator and After Effects.
- Edited training videos and motion graphics that explained technical concepts to learners in engineering training programs.
- Worked alongside the UI/UX team on screen layouts, wireframes and UI assets in Figma, and revised designs through reviews with subject matter experts.

PROJECTS

Bank of Baroda: Website Usability Testing and Redesign
Individual project | Usability Testing, Heuristic Evaluation, UI Redesign | Case study

- Ran moderated usability tests with 3 participants (ages 26 to 42) on 5 home-loan tasks on the live Bank of Baroda website, and audited 5 key screens against Nielsen's heuristics.
- Found 8 key issues, including key actions buried 3 to 4 levels deep, unexplained banking jargon, and confirmation screens with no way to get the receipt back.
- Redesigned the homepage, login menu and navigation into two shallow trees (Loan and Investment), each ending in a 4-step guided flow.
- Rebuilt the Fixed Deposit flow with a rate comparison, a clearly explained nominee step, a maturity breakdown and a final review step before confirmation.

Vayu: Passenger Experience for Regional Electric Flight
Live industry project, Demola | Solo | Service Design, UX Research, App and Web UI | Case study

- Designed the end-to-end passenger journey around the 20 to 40 minute charging or battery-swap stop needed on India's government-backed small-city routes (UDAN).
- Built personas and as-is and to-be service blueprints. They showed the biggest emotional dip happens during the unknown wait.
- Prioritised 13 ideas on an impact/effort matrix. Designed a booking app and website with the stop shown in search results, a 12-hour seat hold, a live battery countdown and an automatic delay payout after 45 minutes.
- Set perceived wait time as the north-star metric, defined a success metric for each idea and planned usability testing with real passengers.

Konecranes: Decision-Ready Crane Maintenance System
Live industry project, Demola | Team of 5 | Worked across research, concept and UI design | Case study

- Turned crane condition-monitoring data into clear guidance for operators, supervisors and technicians: keep operating, schedule maintenance or stop.
- Mapped stakeholders, benchmarked Liebherr, Manitowoc, Terex and Tadano, and identified four user friction points.
- Iterated six times, from a ticket system to a role-based maintenance system built on trust and communication. Delivered an eight-screen interactive demo with user flows for three roles.

SKILLS

UX Research: Usability Testing, Heuristic Evaluation, User Research, Competitive Analysis, Personas, Journey Mapping, Service Blueprints
Design: Information Architecture, User Flows, Wireframing, Prototyping, High-Fidelity UI, Interaction Design, Motion Graphics, Video Editing
Tools: Figma, FigJam, Adobe Photoshop, Adobe Illustrator, Adobe InDesign, Adobe After Effects

ACHIEVEMENTS

- Top 50 Honoree, Design Pitch 2026, UMO Design Foundation (UXINDIA Design Leadership Week, Bengaluru)
- Top Fellow, NextLeap Product Designer Fellowship
- Demola certificate for two live industry projects (Vayu, Konecranes)

EDUCATION

M.Des, UI/UX Design | Ajeenkya DY Patil University | 2025 - 2027 (expected)
BSc, Animation and Multimedia | Arena Animation | 2021 - 2024
